Microcoin

Microcoin represents a range of highly innovative and successful coin acceptors which has provided coin handling solutions to the coin-op industry for over ten years.

With a strong focus on research and development, Microcoin continues to set new standards for the coin validation industry, delivering market specific, innovative solutions which:

- optimise coin acceptance whilst minimising fraud,
- meet required industry standards,
- offer client support & diagnostics software packages.

Microcoin QL

Designed from first principles, the Australian Design Award winning Microcoin QL introduces leading edge, single or multi-currency discrimination for a host of world-wide coin-op applications.

Operating at up to 10 cps, the QL coin acceptor is a high speed, multi-coin, field programmable device which is packed with features, including "Quick Learn" on-board programming. It can accept up to 12 different coins or tokens at speed without compromising the operation of the validator.

Coupled with comprehensive software support packages, the Microcoin QL provides end-users with a modern, generic coin-op solution which they can maintain in-house.

For "front-entry" applications, the Microcoin QL has its own mounting faceplate, offering a modern, stylish appearance to any machine. However, the same Microcoin QL can also be fitted into a top-entry application with ease by virtue of its industry standard size and mounting pin positions.

Support

Backed by dedicated teams of research and development engineers, sales professionals and support staff, the Microcoin product is our commitment to a vision of product excellence and customer satisfaction.

The Company

Astrosys International Ltd specialises in the design, manufacture and distribution of the Microcoin coin validator and GBA bank note reader. It supports its products with ISO9001 certified manufacturing plants and an international network of offices and market representation in Australia, Hong Kong, the United Kingdom, the USA.
