## VORIGO V9-3 CARBON BLOCK

The Vorigo carbon block filter reduces chlorine taste and odour in water supply and will remove sediment down to 1 or 0.5 micron. This filter is recommended for individual use or in RO or staged filter processes.

The Vorigo Carbon Block method of manufacture is by extrusion which means that the media will not release activated carbon particles during startup or operation. It also creates a rigid structure that prevents the movement of absorbent particles or the formation of channels and defects in the absorbent structure.
